We claim:

1	1.	Α	tire	storage	system	, com	prisina:

- a spacer to be placed in an opening of a tire, the tire having a bead of a predetermined circumference and a hollow inside, the spacer comprising:
- a top portion having a circumference greater than the predetermined circumference;
- a cylindrical body having a center; and
- a connecting rod 12 disposed orthogonally through the center of the body; and
- two identical tire caps, a first tire cap and a second tire cap, the tire caps each comprising a head portion and a base portion, wherein the head portion of the first tire cap fits through the opening and the base portion of the second tire cap is disposed atop the tire;
- 13 wherein access to the inside of the tire is prevented when the tire storage
- 14 system is fully engaged.
- 1 2. The tire storage system of claim 1, wherein the connecting rod further
- 2 comprises a first tip and a second tip, wherein the first tip engages securely with
- 3 the head portion of the first tire cap and the second tip engages securely with
- 4 the head portion of the second tire cap when the first tire cap and the second
- 5 tire cap are affixed to the spacer.
- 1 3. The tire storage system of claim 2, wherein the head portion of each tire
- 2 cap further comprises a chamber having a first opening and a second opening,
- 3 wherein the first tip threads through the second opening of the chamber of the
- 4 first tire cap and the second tip threads through the first opening of the chamber
- 5 of the second tire cap when the first tire cap and the second tire cap are affixed
- 6 to the spacer.

- 1 4. The tire storage system of claim 3, the first opening and second opening
- 2 further comprising shafts for preventing the tips from being disengaged from the
- 3 chambers.
- 1 5. The tire storage system of claim 1, wherein the spacer and tire caps are
- 2 formed from an elastomeric compound.
- 1 6. The tire storage system of claim 5, wherein the elastomeric compound
- 2 includes a fire-retardant material.
- 1 7. The tire storage system of claim 5, wherein the spacer and the tire caps
- 2 are treated with a fire-retardant material after formation.
- 1 8. The tire storage system of claim 1, wherein the first tire cap is stackable
- 2 atop a second tire storage system.
- 1 9. The tire storage system of claim 1, wherein a second tire storage system
- 2 can be stacked atop the second tire cap.
- 1 10. The tire storage system of claim 1, wherein the first tire cap is stackable
- 2 atop the second tire cap prior to being engaged with the spacer, and the second
- 3 tire cap is stackable atop the first tire cap prior to being engaged with the
- 4 spacer.
- 1 11. The tire storage system of claim 1, wherein the base portion of each tire
- 2 cap has gently sloping, flexible sides, wherein the sides slightly flatten when the
- 3 tire is disposed atop the tire cap.

- 1 12. The tire storage system of claim 1, wherein the top portion of the spacer
- 2 is disposed over the bead of the tire when the tire storage system is fully
- 3 engaged.
- 1 13. The tire storage system of claim 1, wherein the size of the spacer is
- 2 tailored to the size of the opening of the tire.
- 1 14. The tire storage system of claim 13, further comprising a second spacer,
- 2 wherein the second spacer is larger than the first spacer.
- 1 15. The tire storage system of claim 14, wherein the second spacer is a
- 2 different color from the first spacer.
- 1 16. The tire storage system of claim 3, wherein the head portion is cross-
- 2 shaped, when viewed from overhead.
- 1 17. The tire storage system of claim 1, wherein mosquitoes are prevented
- 2 from breeding inside the tire.
- 1 18. The tire storage system of claim 11, wherein the mosquitoes are
- 2 prevented from breeding atop the tire.
- 1 19. The tire storage system of claim 3, wherein the tips may be severed for
- 2 emergency disengagement of the tire storage system.
- 1 20. The tire storage system of claim 3, wherein the tips are conical in shape.
